AirHMI 4.3" ADVANCED SERIES
AIR480X272S43_A

Overview

   AirHMI is a Human Machine Interface （HMI） solution combining an onboard processor and memory touch display with AirHMI Editor software for HMI GUI project development. Using the AirHMI Editor software, you can quickly develop the HMI GUI by drag-and-drop components (button, label, image etc.) and C based instructions for coding how components interact at the display side. AirHMI HMI display connects to peripheral MCU via TTL Serial (5V, TX, RX ,GND) to provide event notifications that MCU can act on, the MCU can easily update progress and status back to AirHMI display utilizing instructions.

   The Advanced series are more powerful compared to the Elementary series. The Advanced series support: built-in RTC, 7 digital GPIO (2 PWM optional), ADC, larger Flash capacity.

Package include:

*AirHMI AIR480X272S43_A HMI Display
*2mm x 4P power and TTL UART cable
*Power supply board
